SUMMARY

Performance Engineer with 7+ years of experience across financial services, distributed applications, performance engineering, observability and software development. Strong foundation in Python, SQL, AWS, OpenShift, APIs and CI/CD, with hands-on experience building AI-enabled solutions using LLMs, RAG and prompt engineering. Experienced in evaluating and optimizing complex systems for scalability, reliability and performance.

PROFESSIONAL EXPERIENCE

IT Quality Analyst 2

Citi | Dec 2023 – Present

- Led performance engineering activities for critical banking applications, ensuring adherence to SLA and NFR requirements across release cycles.
- Conducted performance analysis using AppDynamics, Grafana, and AWS CloudWatch, identifying bottlenecks and improving application response times by up to 35%.
- Integrated performance validation within CI/CD pipelines, enabling continuous performance assessment and early detection of scalability risks.
- Received the Citi Copper Award for driving performance initiatives and collaborating effectively with partner teams to improve application reliability and delivery outcomes.
- Recognized by the Product Team for certifying a critical application release that achieved zero production downtime, ensuring a seamless customer experience.
- Analyzed production performance trends and implemented recommendations that contributed to a 27% reduction in performance-related incidents.

Systems Engineer

TCS | Oct 2022 – Dec 2023

- Executed varied performance testing scenarios to validate application scalability and reliability under peak workloads.
- Leveraged LoadRunner, AppDynamics, and Grafana to identify performance bottlenecks and reduce performance-related defects by 43%.
- Automated test execution, result collection, and reporting processes, improving team productivity and reducing validation effort.
- Worked closely with developers, architects, and business stakeholders to resolve performance issues during sprint cycles.
- Performed performance tuning analysis across application, database, and infrastructure layers hosted on AWS and OpenShift platforms.

Associate

CTS| July 2019 – Sep 2022

- Developed performance test scripts for Web HTTP/HTML, UI, and API-based applications using LoadRunner (VuGen) and JMeter, ensuring compliance with performance SLAs and NFRs.
- Executed performance testing scenarios, leveraging correlation, parameterization, and workload modelling to simulate real-world user behavior.
- Utilized New Relic to monitor application performance, analyze bottlenecks, and perform root cause analysis across application, web server, and API layers.
- Collaborated with development and infrastructure teams to provide performance tuning recommendations, performance reports, and release readiness assessments for enterprise applications.

EDUCATION

SRM Valliammai Engineering College

B.Tech Information Technology
August 2015 - March 2019

CERTIFICATIONS

- ISTQB - Agile Tester
- Great Lakes - Data science & engineering

TECHNICAL SKILLS

- Performance Engineering: LoadRunner, VuGen, JMeter, Performance Center, Workload Modelling, Stress Testing, Endurance Testing, SLA Validation
- Observability & Monitoring: AppDynamics, Grafana, CloudWatch, Kibana
- Cloud & Platforms: AWS, OpenShift, Splunk
- Programming & Databases: Python, SQL, MongoDB, MySQL
- DevOps & Tools: GitHub, JIRA, CI/CD
- AI & Automation: Prompt Engineering, LLM-Assisted Development, RAG Fundamentals

PRODUCTS & INNOVATION

SideQuest – Experience Discovery Platform

- Designed and developed a full-stack platform that encourages users to explore new experiences and improve personal well-being through gamified quests and progression systems.
- Designed scalable backend architecture, relational data models, and RESTful services to support personalized quest generation, achievement tracking, and user progression workflows.
- Developed core platform capabilities including onboarding journeys, quest management, reward mechanisms, and engagement analytics to drive long-term user retention.
- Owned the product end-to-end, defining vision, user experience, feature roadmap, architecture, implementation, testing, and deployment strategy.
- Tech Stack: TypeScript, PostgreSQL, REST APIs, Git, Full-Stack Development, System Design
